

Coca-Cola Freestyle Orlando: The Command Center for 20 Machines, 3 Million Pours

A dispenser-level analysis of Coca-Cola Freestyle machines across 20 Orlando venues (H1 2026) — sports arenas, hospitals, QSRs, and college campuses — covering flavor mix, timing patterns, location performance, and where the real customization story is hiding.

01 · Overview

20 machines, one story about customization

20 Coca-Cola Freestyle machines across 20 Orlando venues — sports arenas, hospitals, quick-service restaurants, entertainment venues, and college campuses — dispensed 3 million pours and 43.1 million ounces in the first half of 2026, across 15 active flavor options. This analysis covers five report pages: a command-center overview, the flavor mix, time-of-day patterns, a marketing playbook, and a location-level map of all 20 machines.

Freestyle machines are built around a signature idea: hundreds of possible flavor combinations from one dispenser. The data tells a more specific story about how that capability actually gets used.

WHAT SURPRISED ME

Despite the flavor-customization pitch that defines the Freestyle product, 82.9% of all pours are "signature" flavors — standard, uncustomized drinks. The Coca-Cola brand family alone (Classic, Zero Sugar, Cherry Zero, Diet Coke) accounts for roughly half of all pours, and Coca-Cola Classic alone leads with about 25% share.

Key takeaway: The feature that defines this product on paper (endless customization) isn't what most customers actually use it for — they're pouring a standard Coke.

02 · Approach

The analyst workflow behind this report

This project follows a standard data-analyst pipeline end to end:

1. Ingest — pour-level data across 20 Orlando Freestyle machines, 15 flavors, and six months (Jan-Jun 2026), including per-location coordinates and per-hour pour patterns.

2. Power Query — *[transformation steps to follow]*.

3. Star schema & relationships — a single fact table, **FactPours**, connects to **DimFlavor**, **DimLocation**, and **DimDate**, with **DimLocation** further related to **DimLocationType**. A fifth table, **FactTimePattern**, is hidden and unconnected — full diagram in Section 03.

4. DAX measures — *[measure list to follow]*.

5. Data dimensions — **DimDate** (Season, IsPeak, Year) and **DimLocationType** drive the seasonality and venue-type views throughout this report.

6. Analysis & visualization — five dashboard pages — Command Center, Flavor Universe, Time Intelligence, Marketing Playbook, and Orlando Sip Map — covered in Section 04.

7. Reporting — this document.

The semantic model and this report's design system were designed and built by me as part of this analysis — not a default template.

03 · Data Model

Semantic model & DAX relationships

The model is a star schema built around **FactPours** (FlavorKey, LocationKey, MonthKey, OzDispensed, Pours, plus measures for Active Flavors, Active Locations, Avg Oz Per Pour, and Coke Classic %), related to three dimensions: **DimFlavor** (Brand, FlavorCategory, FlavorName, IsSignature, BaseShare), **DimLocation** (LocationName, Latitude, Longitude, MachineCount, Neighborhood), and **DimDate** (MonthName, Season, Year, IsPeak). **DimLocation** additionally relates to **DimLocationType** (TypeCode, TypeName) to drive every venue-type chart in this report.

A fifth table, **FactTimePattern** (DayType, HourBucket, HourLabel, PourPct, Weekday/Weekend Peak Hour Share), is marked hidden in the model view and doesn't appear in the relationships list at all — it's a standalone table, most likely referenced directly by DAX (e.g. via a disconnected-table pattern) to power the Time Intelligence page's peak-hour callouts, rather than joined through the star schema.

Semantic model — FactPours at the center, joined to DimFlavor, DimLocation, and DimDate; DimLocationType hangs off DimLocation; FactTimePattern (hidden icon visible) sits unconnected.

Five pages, one dispenser network

COMMAND CENTER: THE H1 2026 SNAPSHOT

3M total pours, 43.1M oz dispensed, across 20 active locations, with Cola-category drinks at 56.8% and Coca-Cola Classic alone at 24.9% share. Monthly volume dipped slightly in February, spiked in March, dropped back for April-May, then climbed again into June. Sports & Recreation venues dominate pour volume by venue type — nearly double the next-largest category (Quick Service Restaurant) — and Amway Center Arena is the single highest-volume location of all 20.

COCA-COLA FREESTYLE · Command Center — Orlando H1 2026

Total Pours	Total Oz (Millions)	Active Locations	Cola Category %	Coke Classic %
3M	43.1	20	56.8%	24.9%
Total Pours	Total Oz	Active Locations	Cola Category %	Coke Classic %

20 Freestyle machines across 20 Orlando venues serving 15 refreshing options

3M pours, 43.1M oz, 20 locations — Sports & Recreation leads venue-type volume; Amway Center Arena leads by location.

THE FLAVOR UNIVERSE: CUSTOMIZATION ISN'T THE STORY

Of 15 active flavor options, the Coca-Cola brand family (Classic, Zero Sugar, Cherry Zero, Diet Coke) accounts for roughly half of all pours — far ahead of Sprite in second place. The Cola flavor category alone outweighs every other category (Citrus, Lemon-Lime, Tea, Water, Sports, Other) combined. Signature Flavor % sits at 82.9%, meaning the overwhelming majority of pours are standard, uncusomized drinks rather than mix-and-match creations.

COCA-COLA FREESTYLE · Flavor Universe

Total Pours	Cola Category %	Signature Flavor %	Avg Oz Per Pour	Active Flavors
3M	56.8%	82.9%	16.0	15
Total Pours	Cola Category %	Signature Flavor %	Avg Oz Per Pour	Active Flavors

Coca-Cola Classic leads with 25% share · Sprite holds strong at #2 · Zero Sugar growing

Coca-Cola brand family (~50% of pours) and the Cola category dominate — 82.9% signature-flavor share confirms most pours are standard drinks, not customizations.

TIME INTELLIGENCE: WHEN PEOPLE ACTUALLY DRINK

Lunch rush (11am–2pm) drives 28% of all QSR pours on weekdays, tied with the 5–8pm evening block as the single busiest weekday window. On weekends, the pattern shifts: Sports venues peak later, with the 5–8pm block alone capturing roughly 30% of weekend pours — evidence that game-time and evening entertainment traffic, not daytime dining, drives weekend volume.

COCA-COLA FREESTYLE · Time Intelligence

Total Pours	Cola Category %	Signature Flavor %	QSR Share %	Active Locations
3M	56.8%	82.9%	20.4%	20
Total Pours	Cola Category %	Signature Flavor %	QSR Share %	Active Locations

Lunch rush (11am–2pm) drives 28% of QSR pours · Sports venues peak 5–8pm on weekends

Weekday lunch rush (11am–2pm, 28% of QSR pours) vs. weekend evening peak (5–8pm, ~30%) at Sports venues — two very different rush-hour patterns.

THE MARKETING PLAYBOOK: WHERE TO ACTUALLY EXPAND

Peak months drive 38% more volume than baseline months — a seasonality effect worth planning inventory around. The report's own recommendations point in two directions at once: add machines at Sports venues (the proven, highest-volume category) while also pushing Cherry Zero specifically to student-heavy venues — a smaller but distinct opportunity, given four of the 20 locations are college campuses (Rollins, Seminole State, UCF Downtown, UCF Student Union, Valencia East).

COCA-COLA FREESTYLE · Marketing Playbook

Total Pours	Peak Month Pours	Cola Category %	Signature Flavor %	QSR Share %
3M	1M	56.8%	82.9%	20.4%
Total Pours	Peak Month Pours	Cola Category %	Signature Flavor %	QSR Share %

Peak months drive 38% more volume · Add machines at Sports venues · Push Cherry Zero to students

Peak months drive 38% more volume — the playbook recommends both doubling down on Sports venues and a separate, targeted push (Cherry Zero) toward student locations.

THE ORLANDO SIP MAP: A 10X SPREAD ACROSS 20 MACHINES

Pour volume ranges from Amway Center Arena's 518,152 (the highest of all 20 locations) down to Valencia East Campus's 50,709 — roughly a 10x spread. Sports venues account for 42.1% of total pours and QSR locations 20.4%. Notably, the five college-campus locations (Rollins, Seminole State, UCF Downtown, UCF Student Union, Valencia East) cluster at the bottom of the ranking — the lowest-volume segment in the entire network, which is exactly the segment the Marketing Playbook's

"push Cherry Zero to students" recommendation targets. That's a growth play aimed at the weakest segment, not the strongest one.

05 · Recommendations

The transferable takeaway

- **Double down on Sports & Recreation venues for expansion** — already 42.1% of total volume and home to the single highest-performing location; this is the proven, lowest-risk growth lever.
- **Treat the college-campus segment as a distinct growth bet, not a strength** — all five campus locations sit at the bottom of the 20-location ranking; the "push Cherry Zero to students" play is explicitly a bet on an underperforming segment, and should be tracked separately from Sports-venue expansion so the two strategies aren't judged by the same success metric.
- **Stop over-indexing on flavor customization as the core value proposition** — with 82.9% of pours being standard signature flavors, marketing and machine-preset design should reflect that most customers want a familiar drink, not a mix-and-match experience.
- **Staff and restock around two distinct peak patterns, not one** — weekday QSR lunch rush (11am–2pm) and weekend Sports-venue evenings (5–8pm) are different operational windows requiring different scheduling, not a single blanket restocking policy.
- **Track single-location concentration risk** — Amway Center Arena alone represents roughly 17% of total network pours; a machine outage or venue closure there would have an outsized impact on total reported volume.
